十字轴万向联轴器结构特点及应用

The structural features and application of the cross shaft universal couplings

十字轴万向联轴器具有传动效率高，允许两轴间的角位移大，噪音小，对润滑要求不高，传递转矩大，而且使用可靠，因此获得广泛的应用。十字轴万向联轴器按结构分为：整体式叉头结构——UC和剖分式叉头结构——UP两个系列。

The cross shaft universal couplings get a wide range of applications because of high transmission efficiency, allows two-axis angular displacement, lower noise and lubrication requirements, work reliability. According to the structure is divided into: Integral fork head structure— UC and split fork structure— UP two series.

● 十字轴万向联轴器的主要特性

The main features of the cross shaft universal couplings

- ◆ 具有较大的角度补偿能力，UC系列轴线折角可达 $15^{\circ} - 25^{\circ}$ 、UP系列可达到 10° 。
- ◆ 承载能力大，与回转直径相同的其它型式的联轴器相比，所传递的扭矩更大，对回转直径受限制的机械设备，其配套范围更具优越性。
- ◆ 传动效率高，其传动效率达98%~ 99.8%，用于大功率传递，节能效果明显。
- ◆ 运转平稳，噪音低，装拆维护方便。
- ◆ Ability to compensate a large angle, UC Series axis angle can reach $15^{\circ} - 25^{\circ}$, UP series can reach 10° .
- ◆ Large bearing capacity, Compared to other types of couplings with same swing diameter, the greater torque transmitted for the turning diameter limited mechanical equipment, which its matching range has more advantages.
- ◆ High transmission efficiency, The transmission efficiency of 98%~ 99.8%, for high-power transmission, energy-saving effect is obvious.
- ◆ Smooth operation, low noise, easy assembly, disassembly and easy maintenance.

十字轴万向联轴器结构型式

The structural style of the cross shaft universal couplings

● UC系列 UC Series

UC型由于十字轴轴承的固定不用螺栓，避免螺栓松动或断裂，因而提高了这一薄弱环节的强度，提高了使用寿命，并且也便于维修。UC系列适用于不同的需要有7种结构形式：

UC series because of the cross shaft bearing fixed to prevent loose bolts or broken, thus increasing the strength of the weak links, improve the service life, and is easy to repair. UC series apply to different needs. There are seven kinds of structure:

结构名称 Structure name	结构代号 Structure code	结构图 Structure pattern	结构名称 Structure name	结构代号 Structure code	结构图 Structure pattern
标准伸缩焊接式 Standard telescopic welded type	B		无伸缩焊接式 Non-stretch welded type	W	
标准伸缩法兰式 Standard telescopic flange type	F		无伸缩法兰式 No telescopic flange type	X	
短伸缩焊接式 Short telescopic welded type	D		无伸缩短式 No stretch shortening type	Y	
长伸缩焊接式 Long telescopic welded type	L				

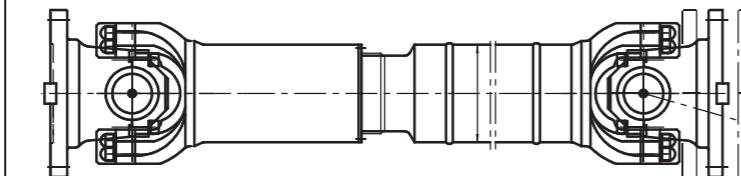

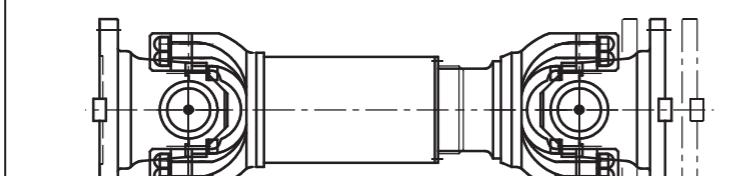

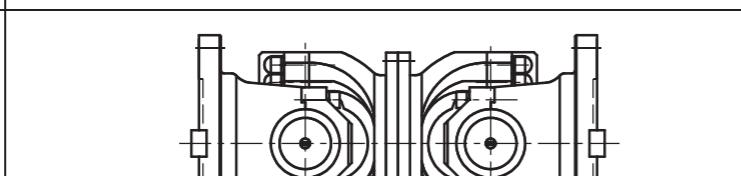

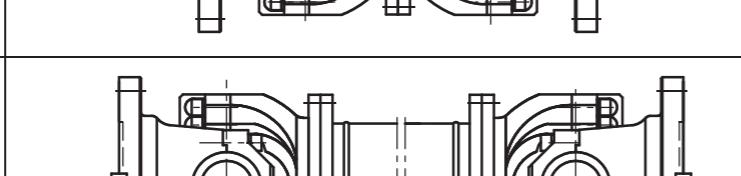

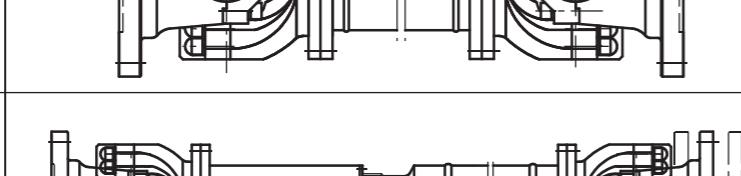

十字轴万向联轴器结构型式

The structural style of the cross shaft universal couplings

● UP系列 UP series

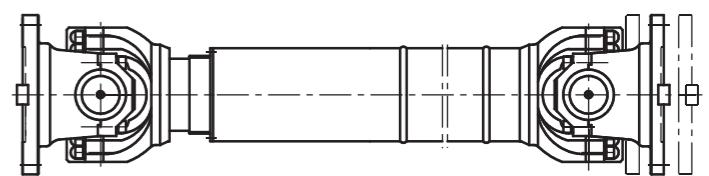

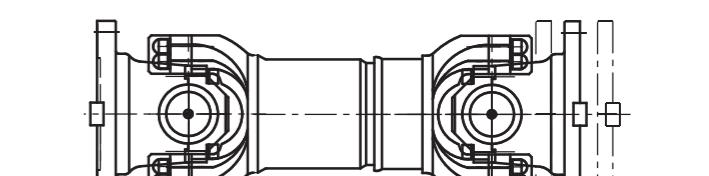

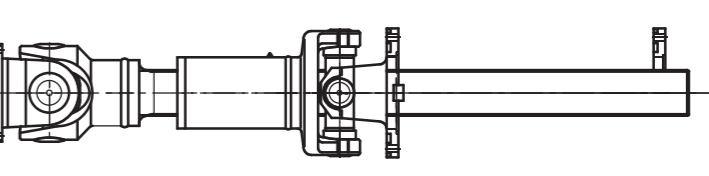

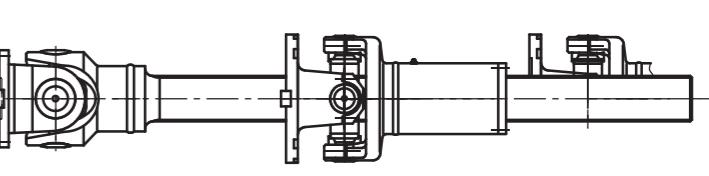

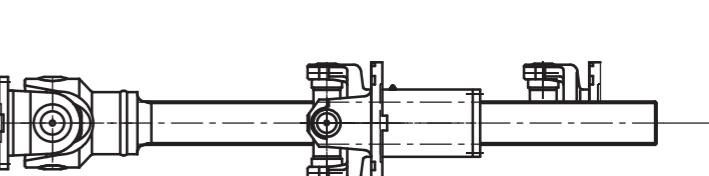

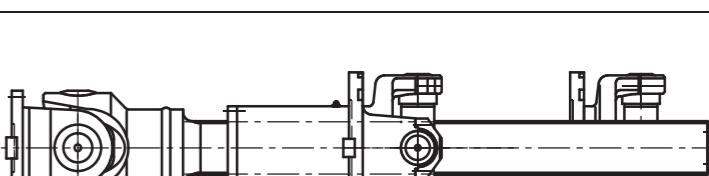

UP型是考虑到轴承是万向联轴器的易损件，将压盖制成剖分，就是为了便于更换轴承。UP系列适应于不同需要有11种结构形式：

The UP type is considering the bearing of universal couplings is quick-wear part, the gland is made split, is to facilitate the replacement of bearings. UP type series apply to different needs. There are eleven kinds of structure:

结构名称 Structure name	结构代号 Structure code	结构图 Structure pattern
有伸缩长型 Telescopic long type	B	
有伸缩短型 Telescopic short type	D	
无伸缩短型 Non telescopic short type	Y	
无伸缩长型 Non telescopic long type	W	
有伸缩双法兰长型 Telescopic double flanged long type	F	

十字轴万向联轴器结构型式

The structural style of the cross shaft universal couplings

结构名称 Structure name	结构代号 Structure code	结构图 Structure pattern
大伸缩长型 Large telescopic long type	L	
有伸缩超短型 Telescopic ultra-short type	C	
花套、法叉正装贯通型 Shaft sleeve and fork of the positive assembly and cut-through type	GA	
花套、法叉反装贯通型 Shaft sleeve and fork of the reverse assembly and cut-through type	GB	
花套反装、法叉正装贯通型 Shaft sleeve of reverse assembly and the fork of positive assembly and cut-through type	GC	
花套正装、法叉反装贯通型 Shaft sleeve of positive assembly and the fork of reverse assembly and cut-through type	GD	

十字轴万向联轴器的选用

The selection and use of the cross shaft universal couplings

选用十字轴万向联轴器时，根据基本信息，计算转矩初步选定联轴器型号规格。再从标准中查出相应型号规格对应的最大孔径、最大径向尺寸（回转空间）、许用转速是否能满足联轴器的工作条件，以确定选用十字轴万向联轴器型号规格。

When select and use the cross shaft universal couplings, according to the basic information and calculate the torque, preliminary select couplings model specification. Then from standard found the corresponding specifications corresponding to the maximum bore size, the maximum radial dimension (Rotary space) and the allowable speed can meet couplings working conditions to determine the selection and use of cross universal couplings model specifications.

● 选用联轴器按以下步骤进行

According to the following steps to select and use couplings

1.1 选用基本信息 / The selection and use of the basic information

驱动机名称、驱动机数量、输入功率、工作转速、工作机名称、载荷类别、工作环境、工作性质、是否频繁启动、是否正反转、输入输出轴直径及长度。

Drive machine names, drive machine quantity, input power, working speed, work machine name, load type, working environment, nature of work, whether frequent start, whether positive & negative, input and output shaft diameter and length.

基本信息见附表1

Basic information see table 1.

1.2 选用计算 / The selection & use and calculation

联轴器的主参数是公称转矩Tn，选用时各转矩间应符合以下关系：

$$T < T_c \leq T_n \leq [T] < [T_{max}] < T_{max}$$

式中：

T—理论转矩, N·m

Tc—计算转矩, N·m

Tn—公称转矩, N·m

[T]—许用转矩, N·m

[T_{max}]—许用最大转矩, N·m

T_{max}—最大转矩, N·m

The main parameter of the couplings is the nominal torque T_n , among various torque when selection should accord with the following relationship:

$$T < T_c \leq T_n \leq [T] < [T_{max}] < T_{max}$$

In the formula:

T—theory of torque, N·m

Tc—computed torque, N·m

Tn—nominal torque, N·m

[T]—allowable torque, N·m

[T_{max}]—allowable maximum torque, N·m

T_{max}—maximum torque, N·m

1.2.1 联轴器的理论转矩计算 / The theory torque calculation of the couplings

$$T = 9550Pw/n$$

式中：

Pw—驱动功率, Kw

n—工作转速, r/min

$$T = 9550Pw/n$$

In the formula:

Pw—driving power, Kw

n—working speed, r/min

十字轴万向联轴器的选用

The selection and use of the cross shaft universal couplings

1.2.2 联轴器的计算转矩计算 / The torque calculation of the couplings

$$T_c = T \cdot K_w \cdot K \cdot K_z$$

式中：

K_w—动力机系数 (见表1)

K—工况系数 (见表1)

K_z—启动系数 (见表1)

$$T_c = T \cdot K_w \cdot K \cdot K_z$$

In the formula:

K_w—coefficient of engine (see table 1)

K—working condition coefficient (see table 1)

K_z—start coefficient (see table 1)

表1 / Table 1

动力机系数K _w Coefficient of engine	动力机名称 Engine name	启动系数 K _z Start coefficient	启动次数 Number of starts	工况系数K Working condition coefficient	载荷分类 Load type	工作机名称举例 Work machine names example
1.0	电动机、透平机 The motor and turbine	1.0	≤ 120	1	均匀载荷 Even load	鼓风机、泵、压缩机、液体搅拌设备、机纺织机械 (印花机、浆纱机)、造纸设备、(漂白机、校平机)、均匀加载运输机 Blower, pump, compressor, liquid mixing equipment, textile machinery (printing machine, sizing machine), papermaking equipment, bleaching machine, leveling machine, uniform loading conveyor
1.2	四缸及四缸以上内燃机 Four and more than four cylinder internal combustion engine	1.3	$> 120 \sim 240$	1.5	轻冲击载荷 Light impact load	机纺织机械 (压榨机、卷取机)、造纸设备(卷取机)、不均匀加载运输机、给料机、印刷机械 Textile machinery (squeezing machine, recoiling machine), papermaking equipment (recoiling machine), non-uniform loading conveyor, feeding machine, printing machine
1.4	两缸内燃机 Two cylinder internal combustion engine	由制造厂确定 Determined by the manufacturer	> 240	2	中等冲击载荷 Medium impact load	提升机械、起重机和卷扬机、旋转式粉碎机、轧制设备、石油机械、造纸设备 (搅拌器和破碎机 卷筒装置、切断机) Lifting machinery, crane and windlass, rotary crusher, rolling equipment, oil machinery, papermaking equipment (agitator and crusher, cutter)
1.6	单缸内燃机 Single cylinder internal combustion engine			2.5	重冲击载荷 Heavy impact load	摆动运输机、碎矿机、碎石机、往复式给料机、橡胶机械 Swinging conveyor, crusher, stone crusher, reciprocating feeding machine, rubber machinery
				3	特重冲击载荷 Extra heavy impact load	可逆输送辊道、初轧机、中厚板轧机、机架辊、剪切机、冲压机 Reversible roller conveyer, blooming mill, plate mill, the breast roll, shearing machine, punching machine

十字轴万向联轴器的选用

The selection and use of the cross shaft universal couplings

1.2.3 当存在下列情况时，应按以下方法计算选型 / When the presence of the following situation, it should be calculated and selection by the following method

① 高峰值载荷

② 刹车制动（刹车轮或刹车盘为联轴器的一部分）

③ 高频率轴向窜动

High peak loads

Brake (brake wheel or brake disc is part of the couplings)

High frequency axial channeling move

峰值载荷 / Peak load

当电机功率大、有冲击载荷、频繁启动和制动、有间歇性运转等系统存在反复性峰值载荷时，联轴器额定转矩等于或大于根据下式计算出的选型转矩。

When the big motor power, impact load, frequent starting and braking, intermittent operation and etc system exists repetitive peak load, the couplings rating torque is equal to or greater than the calculated according to the following formula to calculate the model selection and torque.

a. 无反向峰值载荷 / No reverse peak load

选型转矩 (N·m) = 系统峰值转矩

选型转矩 (N·m) = 系统峰值功率 (Kw) × 9550 / 转速 (rpm)

Selection torque (N·m) = system peak torque

Selection torque (N·m) = system peak power (Kw) × 9550 / rotate speed (rpm)

b. 有反向峰值载荷 / Have reverse peak load

选型转矩 (N·m) = 1.5 × 系统峰值转矩

选型转矩 (N·m) = 1.5 × 系统峰值功率 (Kw) × 9550 / 转速 (rpm)

Selection torque (N·m) = 1.5 × system peak torque

Selection torque (N·m) = 1.5 × system peak power (Kw) × 9550 / rotate speed (rpm)

c. 偶然峰值载荷（无反向） / Occasional peak load (no reverse)

在联轴器的预期寿命期间，如果系统峰值载荷出现次数少于1000次，使用下面公式：

选型转矩 (N·m) = 0.5 × 系统峰值转矩

选型转矩 (N·m) = 0.5 × 系统峰值功率 (Kw) × 9550 / 转速 (rpm)

During the couplings of the expectation life, if the system peak load appeared a number less than 1000 times, using the following formula:

Selection torque (N·m) = 0.5 × system peak torque

Selection torque (N·m) = 0.5 × system peak power (Kw) × 9550 / rotate speed (rpm)

对于反向情况，选用步骤b。

For reverse situation, selects the step b.

十字轴万向联轴器的选用

The selection and use of the cross shaft universal couplings

制动 / Selection

如果制动力矩超过电机转矩，根据下式计算制动选型转矩：

选型转矩 (N·m) = 制动力矩 × 工况系数

If the braking torque exceed the motor torque, according to following formula to select model and torque:
selection torque (N·m) = brake torque × application factor

高频率轴向窜动 / High frequency axial channeling shift

如果轴向窜动超过每小时5次，那么工况系数需增加0.25。

选型转矩 (N·m) = 功率 (Kw) × 9550 × (工况系数 + 0.25) / 转速 (rpm)

If the axial channeling move exceed more than 5 times per hour,
so the working condition coefficient should be increased by 0.25.
selection torque (N·m) = power (Kw) × 9550 × (application factor + 0.25) / rotate speed (rpm)

1.3 初选联轴器型号规格 / The preliminary selection of the couplings model specifications

1.4 选型验证 / Selection validation

1.5 确定联轴器型号规格 / To determine the couplings model specifications

1.6 产品标记 / Product mark

● 选型示例 Selection example

2.1 基本信息 / General information

电机额定功率: 130Kw

Motor rated power: 130Kw

输出转速: 37rpm

Output speed: 37rpm

输入、输出端距离: 2703mm

Input and output end distance: 2703mm

压缩长度: 2650mm

Compressed length: 2650mm

补偿长度: 100mm

Compensated length: 100mm

联轴器类型: 万向轴

Coupling type: universal shaft

平衡等级: G10

Balance grade: G10

工作温度: -30°C ~ 120°C

Working temperature: -30°C ~ 120°C

载荷性质: 中等冲击

Load properties: moderate impact

工作环境: 有灰尘等

Working environment: such as dust etc

工作性质: 连续

Nature of work: continuous

2.2 选用计算 / Select & use, calculation

根据基本信息，本项目选用伸缩万向轴。

According to the general information, this project choose the telescopic universal shaft.

十字轴万向联轴器的选用

The selection and use of the cross shaft universal couplings

选型计算

理论转矩计算

$$T=9550Pw/n=9550 \times 130/37=33554 \text{ (N}\cdot\text{m)}$$

计算转矩计算

$$\text{计算公式 } T_c = T \cdot K_w \cdot K \cdot K_z$$

式中：

$$K_w \text{ 取 } 1 / K \text{ 取 } 2 / K_z \text{ 取 } 1$$

$$T_c = 33554 \times 1 \times 2 \times 1 = 67108 \text{ (N}\cdot\text{m)}$$

selection & calculation

Theoretical torque calculation

$$T = 9550Pw/n = 9550 \times 130 / 37 = 33554 \text{ (N}\cdot\text{m)}$$

Calculated torque

$$\text{Computational formula } T_c = T \cdot K_w \cdot K \cdot K_z$$

In this formula:

$$K_w \text{ choose } 1 / K \text{ choose } 2 / K_z \text{ choose } 1$$

$$\text{Then } T_c = 33554 \times 1 \times 2 \times 1 = 67108 \text{ (N}\cdot\text{m)}$$

2.3 初选联轴器型号规格 / The preliminary selection of the couplings model specifications

SWC285 十字轴万向联轴器 公称转矩 90000N·m

满足转矩要求 初选十字轴万向联轴器 SWC285

SWC285 cross shaft universal couplings nominal torque 90000N·m

Meet the torque requirement. primary selection of cross shaft universal couplings SWC285

2.4 验证 / Verification

2.4.1 孔径 / Bore diameter

基本信息无孔径，此项视同满足要求

Basic information without bore diameter, this shall be regarded as meet the requirements

2.4.2 回转空间（与现场条件比较） / Rotary space (compared with on site conditions)

现场对联轴器最大外径没有限制 此项视同满足要求

There is no restriction to the on site couplings of the max diameter, this shall be regarded as meet the requirements

2.4.3 许用转速 / Allowable speed

联轴器实际输出转速较低,转速为37rpm

满足许用转速

The actual output speed of the couplings is relatively lower 37rpm.

Meet the allowable rotate speed.

2.5 选定联轴器型号规格 / Selected couplings model specifications

因基本信息要求平衡等级 G10

选定联轴器型号规格 SWC285*2650min+100 (伸缩量)

平衡等级 G10

Due to the requirements of basic information are balancing level G102.6

Determination of the couplings model specifications SWC285 × 2650min+ 100 (stroke)

Balance grade G10

2.6 标记示例 / Marking Example

SWC285 十字轴万向联轴器

SWC285*2650min+100 (伸缩量) 平衡等级 G10

SWC285 Cross shaft universal couplings

十字轴万向联轴器联接形式

The form of connection of the cross shaft universal couplings

● 十字轴万向联轴器叉头法兰与相配件法兰的联接形式

The connection form of cross shaft universal couplings flange fork and fittings flange

联接件法兰
Connection Flange

叉头法兰
Fork flange

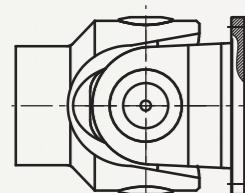

- ◆ 10.9级或12.9级六角头或圆柱头螺栓，10级或8级自锁螺母。
- ◆ 从联接件法兰端插入螺栓，对于无法兰联接件使用双头螺柱。
- ◆ 使用扭矩扳手以达到螺栓的拧紧扭矩。最大扭矩不能超过螺栓材料塑性极限的80%。
- ◆ 10.9 or 12.9 grade hexagon head or cylinder head bolt, 10 or 8 self-locking nut.
- ◆ From the connection piece flange end insert bolt, with regard to the non-flanged connection piece, use the double end studs.
- ◆ Use the torque wrench to reach the bolt tightening torque. Maximum torque bolt material plastic limit cannot exceed 80% .

● 与十字轴万向联轴器相配件的其它连接方式

The other connection methods of the in parts of the cross shaft universal couplings accessories

与十字轴万向联轴器相配件的连接除上述的基本结构外，还有以下结构供客户选用：

In addition to the basic structure above, there are the following structure for customers to choose:

爪牙式连接
Minion connection

端面齿连接
End surface tooth connection

十字轴万向联轴器联接形式

The form of connection of the cross shaft universal couplings

● 十字轴万向联轴器连接套的其他结构

Other structures of the cross shaft universal couplings connected sets

	圆柱孔, 单键槽 Cylindrical Bore. 1 keyway		圆柱孔, 双键槽90° Cylindrical Bore. 2 keyway at 90°		圆柱孔, 双键槽180° Cylindrical Bore. 2 keyway at 180°		圆柱孔, 双键槽120° Cylindrical Bore. 2 keyway at 120°		扁孔 Integral bore

	可替换平键 Replaceable flat keys		可替换平键及圆键 Replaceable flat and round keys		可替换平键及内外衬板 Replaceable flat keys, inner and outer bush		可替换平键及外衬板内定心环 Replaceable flat keys, outer bush and inner centering		

搬运与贮存

Carrying and storage

● 搬运 Carrying

一般情况下，十字轴万向联轴器都是整体交货并采用木箱包装。吊运时绳索应兜挂木箱枕木外侧（见右图），要力求使木箱始终处于水平状态。

Generally universal joint are packaged with wooden case and supplied intergral. When swinging, the ropes should hang on the sleepers' outboard of the boxes and the boxes should be in horizontal position.

没有木箱直接吊运万向节时，应按右图所示吊挂万向节内侧的两个叉头，以避免发生撞击。

When without wooden box to direct lifting universal couplings, they should be shown right, hanging two fork head of inside universal joint to avoid collision.

直接吊运万向节时，严禁将绳索或链条拴在中间部位，特别是可伸缩型万向节，更不可将其拴在花键轴和花键套上，否则很可能损坏万向节，甚至因花键轴滑出造成人身事故。

When lifting the universal joint directly, it is forbidden to tie the rope or chain in the middle of the universal joint parts, especially the scalable universal joint, more could not be tied to the spline shaft and spline sleeve, otherwise it may damage the universal joints, and even caused the human injury due to spline shaft slide.

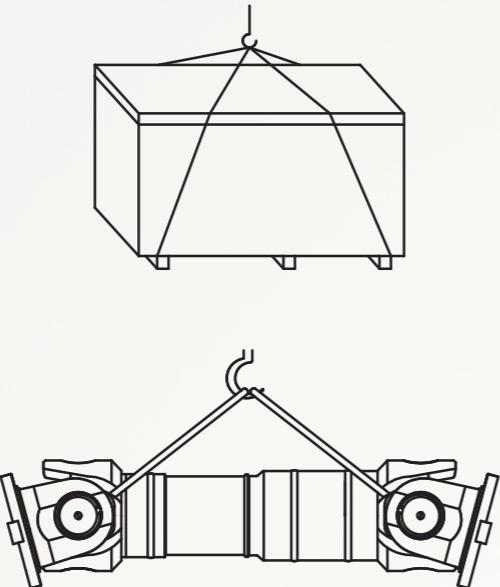

● 贮存 Storage

万向节在安装前如需长期存放，应保留其关键外露表面涂敷的保护层。其存放地点应保持干燥、通风。如户外存放，必须将万向节置于箱内，并在地上加垫，将其垫起一定高度，同时还要采取防雨措施。

没有木箱包装的万向节不应露天存放，也不应重叠码放，不仅应将其置于干燥、通风的场所，还应注意花键和联接法兰等部位的防锈。

If the universal joint needs long-term storage before installation, should retain its key coating protective layer in the exposed on the surface. Its storage place should be kept dry and ventilated. Such as outdoor storage, universal joint must be placed in the trunk, and put a mat on the floor to a certain height, meanwhile take rainproof measures.

The universal joint without wooden package should not be stored in open air, also should not overlapping stacking, not only should be placed in dry and ventilated place, should also pay attention to the spline and the connecting flange and other parts of the anti-corrosive.

十字轴万向联轴器的安装、调整与润滑

The installation, adjustment and lubrication of the cross shaft universal couplings

● 安装前的准备工作

The preparing work before assembly

安装前应核对产品标牌上的型号、规格及安装尺寸等是否符合既定要求。当符合要求可以安装时，应先行清除法兰端面及联接止口处粘附的异物，修光毛刺与磕碰，做好安装准备。

Before installation, should check the product label type, specification and installation size whether is in accordance with the established requirements. When meet the requirements and can be installed, should first remove the flange end face and the connection mouth adhesion of foreign body, repair the burr and knock against, is ready for installation.

对于可伸缩型万向节，出厂前组装时已使其两端叉头的相位相同，并在中部接管处以两个相对的箭头左右标记。安装前要检查叉头的相位是否符合要求，若不符合要求，应将万向节分离予以纠正后方可进行安装。

When before leave factory and assembled, make the telescopic universal joint fork head on both ends of is the same phase, and use two opposite arrows to mark in the middle of the tubing. Before installation should check the phase of the fork whether is in line with the requirements, if do not conform to the requirements, only after separating the universal joint and should be corrected, it can be installed.

● 轴套的安装

The installation of the shaft sleeves

轴套在安装之前，应检查各部尺寸是否符合设计要求，经确认无误后即可着手清除毛刺并将配合部位清洗干净，准备安装。

对于过盈联接的轴套，应采用油浴或感应炉中均匀加热的方法加热轴套，使轴孔胀大后将其安装到相配轴颈上。加热温度不得超过200℃。

The shaft sleeves before installation. should check the dimension of each parts whether comply with the design requirements and begin to remove burrs after confirmed, will cooperate with parts clean and ready to install.

For the interference connection sleeve, should adopt oil bath or even uniform heating method to heat shaft sleeve in the induction furnace, after the shaft whole swell, Install to a suitable shaft neck. The heating temperature should not exceed 200℃.

● 万向节的安装

The installation of the universal couplings

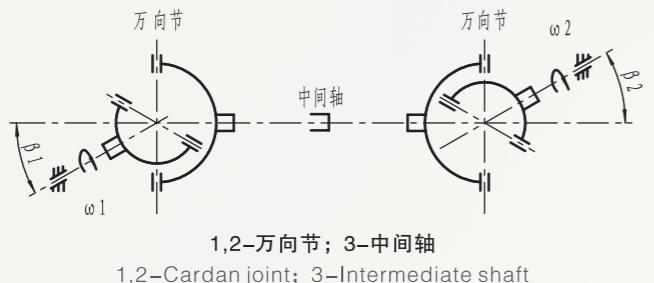

万向轴由两个万向节和一根中间轴所构成，为使主、从动轴的角速度相等，即 $\omega_1=\omega_2$ ，须满足下列三个条件：

Universal couplings is made up of two universal joint and an intermediate shaft, in order to make the driving shaft and driven shaft angular velocity are equal, namely, $\omega_1=\omega_2$, shall meet the following three conditions:

十字轴万向联轴器的安装、调整与润滑

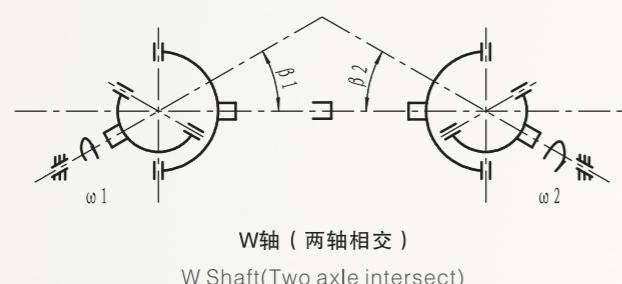

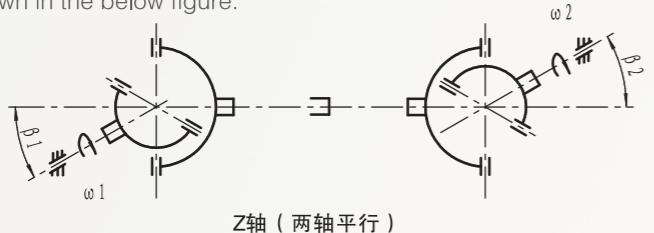

The installation, adjustment and lubrication of the cross shaft universal couplings

- ◆ 中间轴与主、从动轴间的节点倾角相等，即 $\beta_1 = \beta_2$;
- ◆ 中间轴两端的叉头位于同一相位;
- ◆ 主、从动轴与中间轴的中心线在同一平面内。
- ◆ The nodes angle of the intermediate shaft is equal with drive shaft and driven shaft, namely $\beta_1 = \beta_2$;
- ◆ The fork at the two ends of the intermediate shaft is in the same phase;
- ◆ The driving shaft and driven shaft and intermediate shaft centerline in the same plane.

万向联轴器的安装形式按其轴线相互位置一般为Z型和W型, 如下图所示:

According to its axis of mutual position, the installation of the universal couplings type generally is divided into Z and W, as shown in the below figure:

- ◆ 安装万向节时要按1.2吊装图所示的方法将其吊运到安装位置。间隙配合的法兰轴套, 将轴套装到轴伸上, 再按同样的方法安装另一端; 非间隙配合的法兰轴套, 则先将驱动端键与键槽或齿与齿槽(牙嵌式及端面齿法兰)对准, 然后将螺栓插入螺栓孔中, 均匀地拧上螺母并拧成半紧状态, 按同样的方法安装被驱动端。
- ◆ 先用普通扳手将所有螺栓和螺母均匀地拧在一起, 基本上拧到法兰平面完全靠紧, 然后用力矩扳手以对角线交叉的方式按规定的力矩将其拧紧。拧紧力矩见附表2和附表3
- ◆ 安装万向节时, 严禁锤击关节轴承部位。严禁用安装杠杆转动万向节, 否则会损坏轴承密封件。
- ◆ 法兰联接应采用10.9级高强度螺栓和10级高强螺母, 并应采用防松螺母或涂敷螺纹紧固密封胶等防松措施, 但不准敷润滑油脂。
- ◆ 安装可伸缩型万向节时, 要特别注意防止花键副脱开, 造成人身和设备事故。
- ◆ 可能因万向节运转造成人身及设备事故的场所, 要为万向轴设置防护罩。

十字轴万向联轴器的安装、调整与润滑

The installation, adjustment and lubrication of the cross shaft universal couplings

- ◆ When installing universal joint, lifting to the installation location according to the method of hoisting figure shown in 1.2. clearance fit the flange shaft sleeve, to install shaft sleeve on shaft body, and then install the other end the same way; Non clearance fit the flange shaft sleeve, first, the drive end keys and keyways or tooth and alveolar (tooth type and end face tooth flange) aligned, the bolt is then inserted into the bolt holes, tighten the nuts evenly and twisted semi tightly state, to install the driven end by the same way.
- ◆ Using ordinary wrench to screw all bolts together with nuts evenly, twist to the flange plane basically to completely on tight, and then use torque wrench in accordance with the way of diagonal cross according to the specified torque to tighten it. Tightening torque as shown in table 2 and table 3.
- ◆ When installing the universal joint, it is strictly prohibited to hammer the joint bearing parts, and It is also forbidden to use install lever turning universal joint, otherwise you will damage the bearing seals.
- ◆ Flange connection should adopt 10.9 grade of high strength bolt and 10 grade of high-strength nut, also the locking measures with lock nut and coating threaded fastening sealant, but are not allowed to coating the grease.
- ◆ When installing a scalable type universal joint, pay special attention to prevent spline pair off, caused personal and equipment accident.
- ◆ The place that caused personal and equipment accident caused by universal joint operation, should set protective cover for universal couplings.

● 润滑 Lubrication

良好的润滑对延长万向节的使用寿命至关重要, 因此在初始运行之前, 特别是花键轴应先行进行充分润滑, 以补足出厂前尚未填充的部分。润滑方法是向位于十字轴端部和中间管段处(可伸缩型)的润滑油嘴注入润滑脂(环境温度在-20℃~120℃范围的推荐采用2号锂基脂加5%power润滑剂, 并不得与其它油脂混用, 当环境温度超过120℃时, 推荐采用4号高温润滑脂)。注入油脂时以其从各密封圈部位溢出为止。润滑装置自选。注油压力一般控制在0.5Mpa以下。对于可伸缩型万向节, 应在花键轴缩回极限位置时注油, 以防内部空间充满油脂影响伸缩运动。

Good lubrication is very important for extending the service life of universal joint, so before initial operation, especially the spline shaft should be sufficient lubricated, in order to complement the part that has not been filled before leaving factory. Lubrication method is to inject grease to the lubricating oil mouth which located in the cross shaft end and the middle section (telescopic) (in - 20 °C ~ 120 °C environment temperature range, 2 lithium base grease and 5% power lubricants is recommended, and shall not be blended with other grease. When the temperature exceeds 120 °C, 4, high temperature grease is recommended). When injecting grease, till overflow from each seal ring parts. Lubrication device is optional and general control the oil pressure is below 0.5 Mpa. For scalable type universal joint, oiling in the limit of the spline shaft position, in case of internal space full of grease, thus affecting telescopic movement.

润滑时间间隔

万向节投入使用500小时以后, 应将关节轴承和花键副再次润滑。其后的润滑周期可根据万向节使用环境的好坏灵活掌握。环境好的可达6个月润滑一次, 次之可定为3个月。对于冶金行业等在恶劣的多尘、多水及高温环境下使用的万向轴, 应一个月, 甚至每周润滑一次。

Lubrication time interval

Universal joint put into use after 500 hours, should lubricate the joint bearing and spline pair together again. To flexible master the subsequent lubrication cycle according to the universal joint use of the environment is good or bad. If the environment is good, lubricate it can be up to 6 months, once every three months. For metallurgical industry etc, using universal shaft in the bad dust, water and high temperature environment, should once every month, or even once a week.

十字轴万向联轴器的使用、维护、保养

The use, maintenance, preservation of the cross shaft universal couplings

● 维护 Maintenance

为保证万向节具有最佳运行质量和延长使用寿命，应认真做好万向节的日常维护工作，其具体内容如下：

- In order to ensure the universal joint possess best operation quality and prolong the service life, should conscientiously do the good daily maintenance job of universal joint, its concrete content is as follows:
- ◆ 每天检查一次联接法兰等各部位的紧固件是否松动，如有松动应立即紧固。
 - ◆ 检查万向节的轴承是否发热和有噪声，花键副是否磨损严重，有异常振动和噪声。当出现上述情况时，应及时查明原因，并拆下万向节采取更换零件等修理措施，避免万向节带病作业。
 - ◆ 按“润滑”推荐的内容定期进行润滑。
 - ◆ Check once a day that whether the connecting flange and so on various parts of the fasteners is loose or not, if there are any loose, fastening immediately.
 - ◆ Check whether the universal joint bearing is fever and noisy, the spline pair is wear serious, any abnormal vibration and noise or not. When appeared the above situation, should be timely find out the reason, remove the universal joint and replacement parts and repair measures and so on, such as avoiding universal joint sick work.
 - ◆ To lubricate on a regular basis according to the content of the recommend.

● 修理 Repair

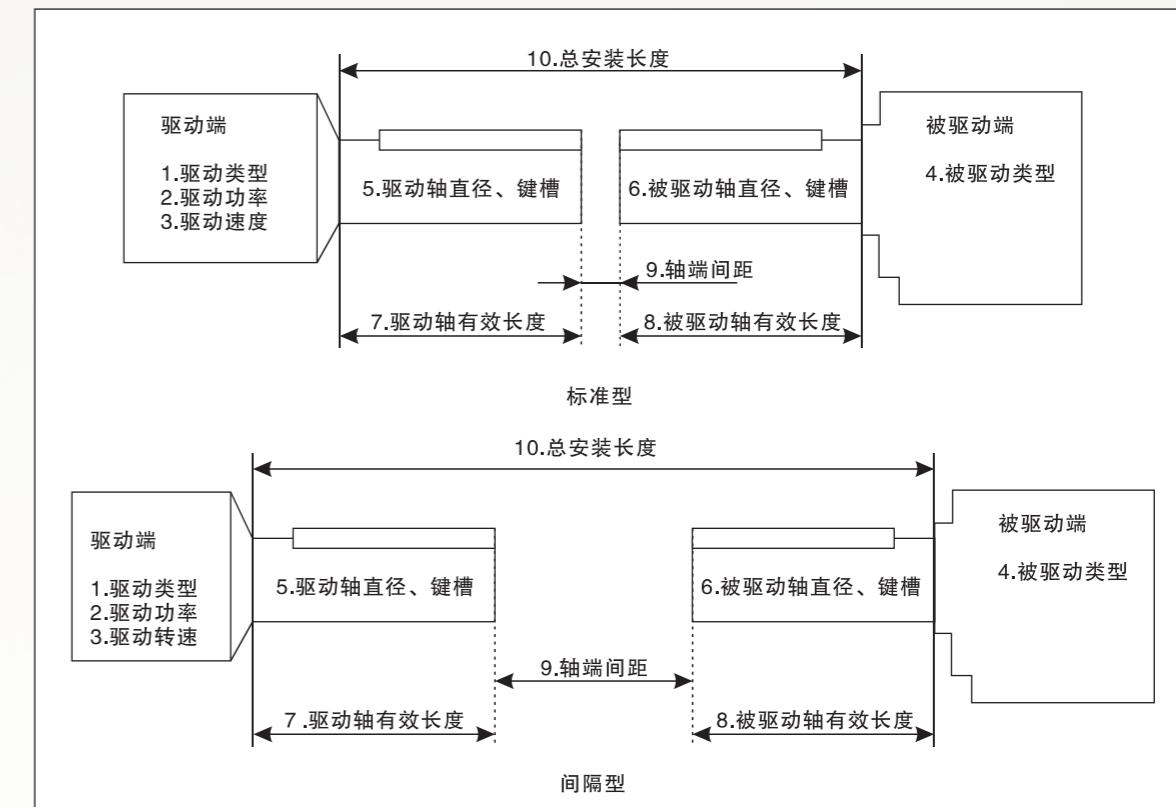

- ◆ 根据我国不同行业和使用现场环境条件的具体情况，万向节的维修周期定为3~12个月不等。环境条件好的可长一些，条件恶劣的一般可定为3个月，用户可根据自己的具体情况自行确定。维修的重点是检查、清洗、更换十字轴总成的零部件。建议维修时原有密封圈一定要换新。
- ◆ 鉴于万向节易损件损坏情况复杂和现场条件的限制，我们建议用户在现场拆除万向节两端法兰轴套后，将其发运至生产厂进行大修。
- ◆ 如因特殊情况不得不在现场卸下万向节进行修理时，尤其是对于可伸缩型万向节，我们建议一般情况下不要将花键副拉开，以避免复原时装错。在紧急情况下必须拉开花键副时，一定要在花键轴和花键套上预先做好清洗的对位标记后，再将花键轴从花键套中拉出。重新安装时切记按预定标记复原。
- ◆ 拆卸万向节时，为保证人身与设备安全，一定要按上述安装万向节的吊运与拆卸方法进行操作。
- ◆ According to different industries in China and using the specific circumstances of the site environmental conditions, the universal joint of the maintenance cycle for 3 ~ 12 months. Good environmental conditions can be longer. Generally harsh conditions may be for 3 months, the user can on the basis of their own specific circumstances to determine. The focus of the maintenance is inspection, cleaning, replace the cross shaft assembly of the spare parts. Suggestions in the maintenance, the original seal ring must be replaced.
- ◆ In view of quick-wear part of the universal couplings, the complexity of the damage and the limitation of the condition on site, we recommend that after users at the scene the demolition of universal joint on both ends of the flange shaft sleeve, delivery to the factory for repair.
- ◆ In the event of the special circumstances had to unload the universal joint at the scene to repair, especially for scalable type universal joint, we suggest that don't pull open the spline pair to avoid the assembly error when the product is recovered. In case of an emergency must pull spline pair open, must premade alignment marks after cleaning on the spline shaft and the spline sleeve, then pull the spline shaft from the spline sleeve. Remember when re-installing according to predetermined tag.
- ◆ When removing the universal joint, in order to ensure personal and equipment safety, to operate according to the lifting and removal methods of the universal joint above mentioned.
